

Juan Samael Amaral Bravo

Systems & Automation Specialist · Frappe · AI-Assisted Development

Apaseo el Grande, Guanajuato, Mexico · Open to relocation · Amaral.Samael@Outlook.com · linkedin.com/in/samaelamaral · github.com/Samarisco

SUMMARY

Computer Systems Engineer and sole owner of the IT function at Fast Market, where I built the Frappe-based ticketing system, API-driven automated alerts, and the team's technical training program. I build software with AI agents using my own workflow for planning, review, and testing. Seeking roles in advanced IT support, automation, and infrastructure.

EXPERIENCE

- Fast Market**
IT Support, Development & Automation Intern (Mexico)

Apaseo el Grande, Mexico
Aug 2026 – Present

 - Designed and built the internal ticketing and incident-management system on Frappe, tailored to daily operations and ready to scale, centralizing support-request tracking.
 - Implemented API-driven automated alerts and monitoring for systems and services to detect incidents and track them to resolution.
 - Designed a multi-agent engineering system (an orchestrator plus tech-lead, backend, frontend, QA, security, and DevOps agents) with standards, hooks, and a pull-request workflow for controlled AI-assisted development.
 - Created the IT training program (manuals, videos, and guides) and ticket reporting to standardize the department's operations.
- Mubea** (automotive manufacturing)
IT Support Intern

Apaseo el Grande, Mexico
Jan 2025 – Aug 2025

 - Resolved hardware, software, and connectivity incidents for corporate users on the plant floor, from diagnosis through closure.
 - Managed Active Directory accounts: account provisioning (including executive accounts), password resets, and profile updates.
 - Configured wireless access points and network drops, and supported IT infrastructure assessments.
 - Performed data backup and recovery for user workstations.

PROJECTS

- DiosesmonDex** — diosesmondex.onrender.com

Aug-Oct 2026

 - Built a community-driven Pokédex for a Cobblemon (Minecraft) server with React + TypeScript, Node/Express, and PostgreSQL (Neon), deployed on Render and documenting 823 species from real server data.
 - Developed a versioned public API with OpenAPI docs and rate limiting, Discord OAuth2 login, Discord bots, and real-time chat (SSE).
 - Took the project from MVP to a full platform with a public API and bots in 3 days, working with AI agents and backed by 247 automated tests (Vitest).
- Sign Language Translator**

Python · OpenCV · TTS

 - Prototyped hand-position and gesture detection with OpenCV, converting signs into text and speech.

SKILLS

- Systems & Support:**

Active Directory, networking (APs, network drops), backup & recovery, Windows 11, PowerShell, monitoring
- Development & Automation:**

Frappe, Python, JavaScript/TypeScript, React, Node/Express, SQL (PostgreSQL, SQLite), MongoDB, Docker, Git/GitHub
- Applied AI:**

agent-based development (Claude Code, OpenCode), multi-agent workflow design

EDUCATION & CERTIFICATIONS

- B.S. in Computer Systems Engineering** — Virtual University of the State of Guanajuato (UVEG)

2023-2026

Degree completed; temporary professional license issued, diploma pending.
- ONE Tech Foundation G8 – Back-End Track (Oracle Next Education)** — Alura Latam

Jan 2024 – Aug 2025

Spring Boot, Spring AI with OpenAI.

LANGUAGES

Spanish (native) · English (intermediate — technical reading and documentation; actively improving)
